WINAR CONNECTION

in partnership with

eaxtron

Fast Charging Cable Assemblies

Customizations include:

- Cable size + type
- Length
- Connection type (lug, connector, etc.)
- Custom labels
- Harness protection – braided expandable sleeving, spiral wrap, etc.
- Voltage keying
- Plus many more!

Safety

Effortlessness

Efficiency

Durability

We use EAXTRON recommended tools and crimping methods in order to comply with industry standards.

SAFETY FIRST INITIATIVES

LOCKING HANDLES: available on both the Male Connector and Female Connector. Locking connectors during charging and during truck operation

ANTI-ARC: the design of the anti-arc on the tip of the female socket

VORTEX: the patented Vortex Clip within the female socket produces increased connection interface

- Higher Conductivity
- Lower Connector and Cable Temperatures
- Increased Charging Efficiencies - saves energy costs

COLOR CODED CABLE CLAMPS: durable design provides a more secure positioning of the cables

- Eliminating exposed copper and loose cables during mating
- Color Coded Clamps offer operations the flexibility to position assets by color and is easier for truck operators to identify the correct charger to plug into

EFFORTLESS & SECURE CONNECTIONS: the design of the male plug and female socket (with **VORTEX**) results in easier mating and unmating of the connectors - for a growing diversity in our workforce of the industry's truck operators

CONNECTOR WARRANTY: Full One Year Warranty on the connectors with a Lifetime Warranty on the locking handles - another Eaxtron industry first

W-CRIMPING: Eaxtron promotes and sells main contact crimpers that have proven to increase conductivity, decrease resistance, and prolong the life of the cable and connectors

UL APPROVED: EAXTRON USA connectors have been tested and approved by both UL and The CSA Group in Canada
